Professional Summary

Seasoned **Software Engineer** with 7+ years of experience developing applications, databases, and cloud computing solutions, complemented by hands-on customer-facing roles. Proven ability to **troubleshoot, analyze, and resolve complex technical and operational issues**, delivering high-quality software and ensuring precision in quality control and client service.

Technical & Core Skills

- **Languages & Frameworks:** C#, JavaScript, React
 - **Cloud & DevOps:** AWS, Azure DevOps, Docker, Jenkins
 - **Version Control:** Git
 - **Core Competencies:** API Development, Back-End & Front-End Web Development, Software Design & Architecture, Troubleshooting & Debugging, Agile Methodologies, Process Optimization, Quality Control
-

Work Experience

Guitar Handler (Quality Control)

Sweetwater – Fort Wayne, IN

Aug 2025 – Present

- Conducted **quality control inspections** on electric and acoustic guitars to ensure instruments met playability and performance standards.
 - Documented inspection results and provided **clear feedback** to repair technicians and management.
 - Maintained a reputation for **precision, consistency, and reliability** in instrument evaluation.
-

Sales Associate

Kay Jewelers – Fort Wayne, IN

Feb 2025 – Present

- Engaged with customers to build rapport and loyalty.
 - Accurately processed **POS transactions** and assisted with product inquiries.
 - Helped customers locate products and verified availability across store locations.
 - Solved customer challenges by offering **relevant products and services**.
-

Library Processor

Ingram Book Company – Fort Wayne, IN

Feb 2025 – Aug 2025

- Worked independently and collaboratively to meet daily workflow and assembly goals.
 - Quickly adapted to new tasks and processes in a dynamic environment.
 - Assembled products according to **daily work orders and customer specifications**.
-

Software Engineer II

Sparq – Fort Wayne, IN

May 2021 – Oct 2024

- Partnered with cross-functional engineers to **analyze and improve software–hardware interfaces**, reducing integration errors.
 - Evaluated technical solutions against **customer requirements**, ensuring alignment with business needs.
 - Delivered **unit-tested, production-ready systems** within prescribed timeframes, improving release reliability.
 - Designed and implemented **scalable, modular, API-centric architectures** using C#, React, and AWS, with version control in Git and CI/CD pipelines managed through Azure DevOps.
-

Software Engineer

Ontario Systems – Muncie, IN

May 2018 – May 2021

- Served as **lead developer** for migrating legacy desktop components to a modern web-based application, improving accessibility and performance.
 - Boosted development efficiency by **automating environment setup with Docker** and managing builds/deployments through **Jenkins**, reducing onboarding time and release friction.
 - Designed, coded, tested, debugged, and documented applications using **JavaScript** within Agile practices, ensuring faster delivery and high code quality.
 - Collaborated with team members using **Git** for version control, maintaining clean and reliable codebases.
-

Education

Taylor University – Bachelor of Science in Computer Science

Graduated Jan 2018
